Pump Section and List of Main Components 41

EV Series
Vertical Multistage Centrifugal Pumps

APPLICATIONS

- Pressure boosting and water supply systems
- Water treatment plants
- Boiler feed
- Handling of water, free of suspended solids, in the civil, industrial and agricultural sector
- Wash down unit
- Irrigation systems
- Circulation of hot and cold water for heating, cooling and conditioning systems

FEATURES

- Full stainless steel compact and solid structure
- Liquid end made of stainless steel in order to achieve durability, superior efficiency and the highest performances
- Standard mechanical seal (EN 12756 ex DIN 24960)
- Oversize ball bearing (bearing bracket) ensure motor bearing long life and eliminates axial and other adjustments of moving parts
- Tungsten carbide intermediate bearing to control and eliminate vibration and stabilize the rotor with a large number of stages
- Standard motor without oversize bearing, size B14 up to 4kW / size B5 from 5.5kW and above, Protection degree: IP55, Max ambient temperature: 40°C, Insulation class: F.
- Easy installation IN LINE ports

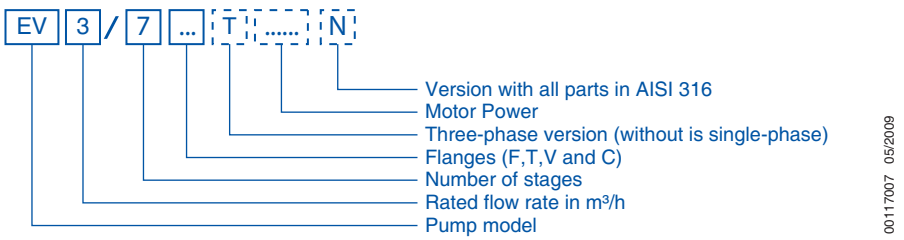

SPECIFICATIONS

- Capacities up to 26 m³/h at 50Hz / 32 m³/h at 60Hz and heads up to 25 Bar
- Discharge and Suction port: Oval, Round flanges, Victaulic and Clamp connections
- Maximum working pressure: Oval flange 16 Bar
  Round Flange, Victaulic and Clamp connections 25 Bar
- Liquid temperature range: from -15°C to +120°C
- Direction of rotation : clockwise looking at the pump from the top down (for EV 3-5-9)
- Direction of rotation : counter-clockwise looking at the pump from the top down (for EV 16)
- Materials: suitable for handling potable water (WRAS certified)
- Hydraulic characteristics are guaranteed, according to ISO standard 9906 annex A

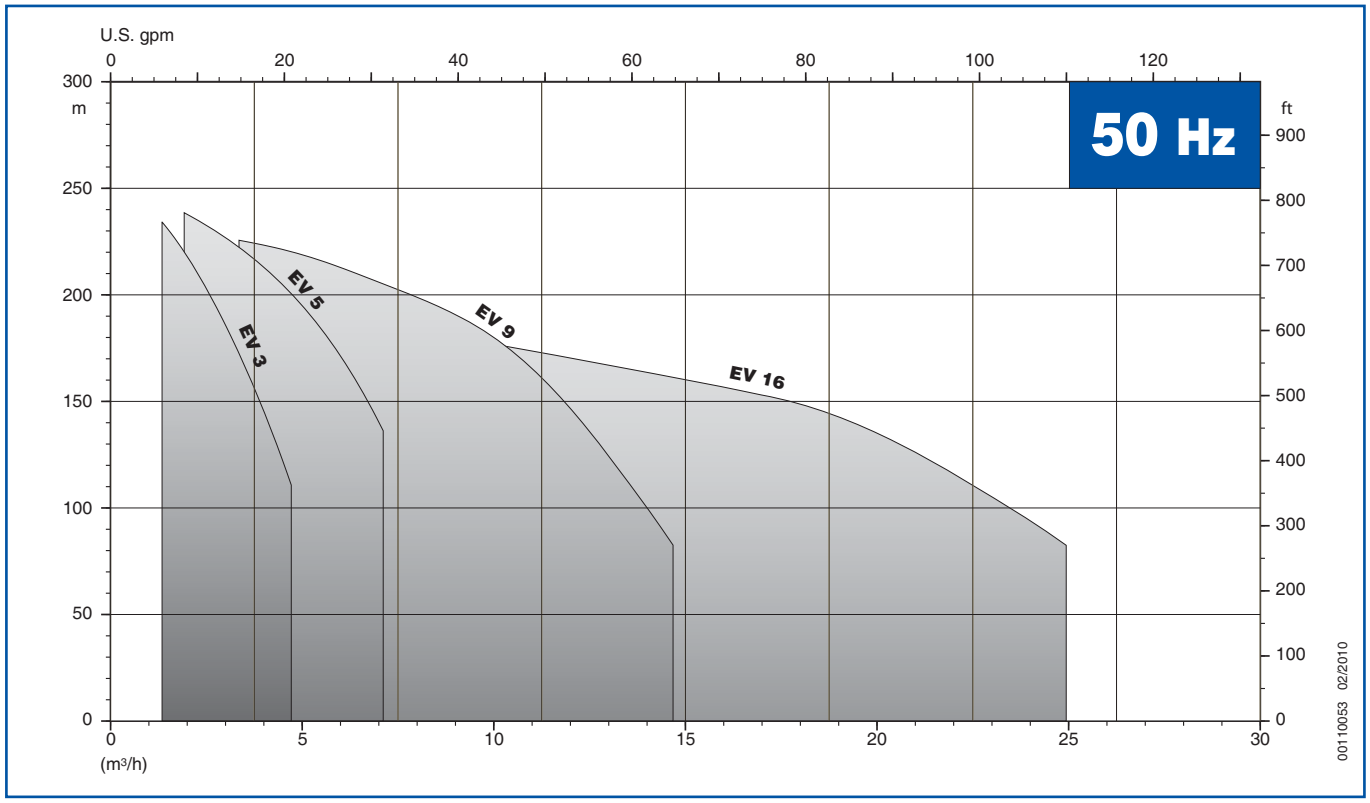

AVAILABLE ON REQUEST

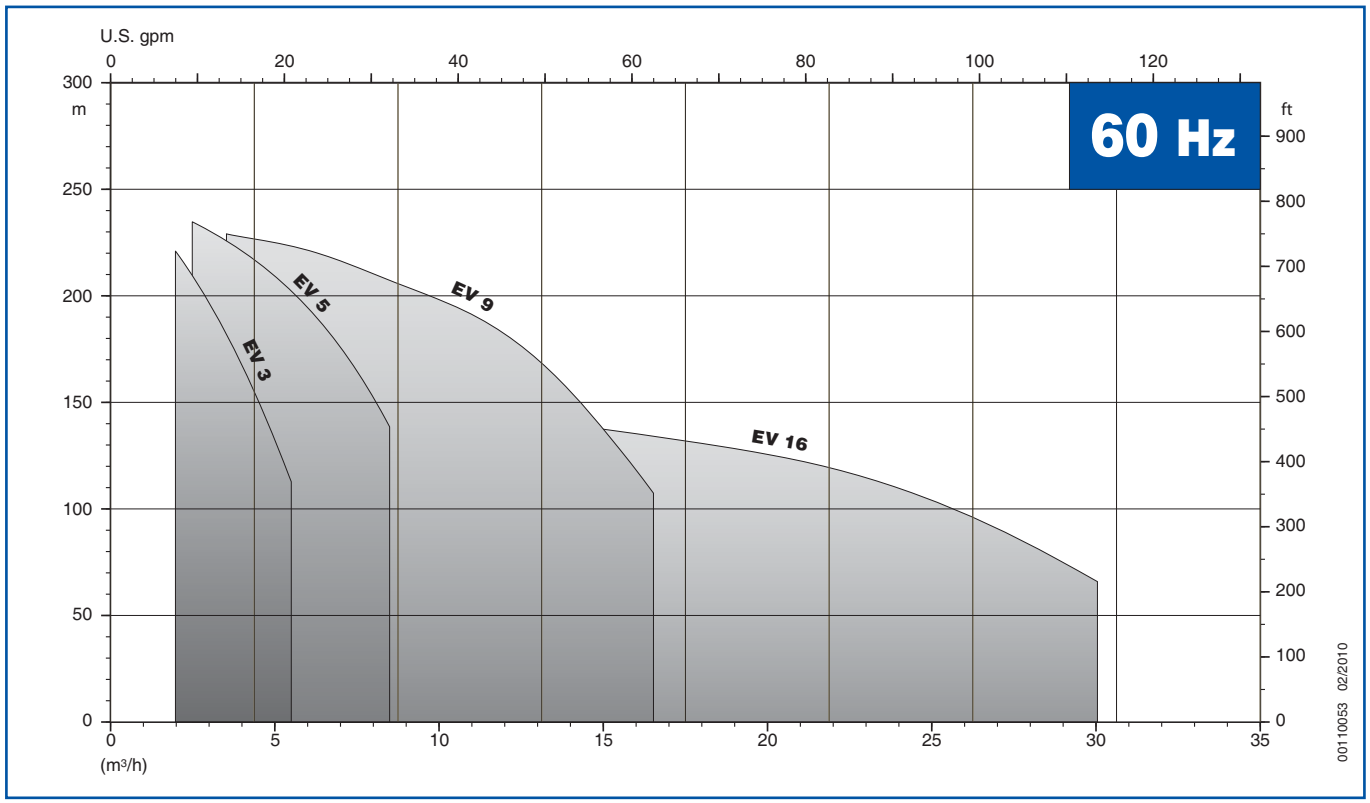

- AISI 316 version
- Special materials for the mechanical seal, gaskets and elastomers
- Oval counter flanges
- Round counter flanges

PUMP IDENTIFICATION CODE

00117007 05/2009

It is our policy to continuously develop and improve our products, therefore, we reserve the right to amend specifications without prior notice.

Motors – AEG

FEATURES

- Protection degree: IP55
- Max ambient temperature: 40°C
- Insulation class: F
- Size B14 up to 4kW, size B5 from 5.5kW and above

SINGLE-PHASE MOTORS

- The range available is especially designed for superior performance and low vibration and noise. The AMM range is ideal for low-inertia applications and the application industry.
- Standard Voltage 230V

THREE-PHASE MOTORS – ENERGY EFFICIENT

High Efficiency Three-phase Motors IE2 code
The standard design includes the following basic features to give a high level of flexibility:

- Multi Mount Construction for an easy change of terminal box position
- Terminal box rotates by 90° to allow cable entry from any direction
- Easy-to-change flanges with over-sized and smaller-sized dimensions
- Provision for oil seal at Drive End
- Motors conforming to the higher efficiency standards for Europe, North America and Australia
- Standard Voltage up to 3kW 230/400V, 400/690V from 4kW and above

Single-phase motors designed for range of rated voltage
220-240 V ± 5% - 50 Hz

For mains voltage to IEC 60038
230 V ± 10% - 50 Hz

New International Efficiency classes of motors – IE code

The new IEC 60034-30:2008 defines worldwide the efficiency classes of motors.
IE1 = Standard Efficiency (comparable to EFF2)
IE2 = High Efficiency (comparable to EFF1)
IE3 = Premium Efficiency
The efficiency levels according to IEC 60034-30 are measured based on the test methods defined in IEC 60034-2-1:2007.
The IEC 60034-30 only defines requirements of efficiency classes and aims to create provisions for International consistency. It does not define which motors must be supplied with which efficiency level. This is left to respective regional legislation.

Output	IE1 code Standard Efficiency			IE2 code Standard Efficiency			IE3 code Standard Efficiency		
kW	2 poles	4 poles	6 poles	2 poles	4 poles	6 poles	2 poles	4 poles	6 poles

Efficiency values according to IEC 60034-30;2008.
Efficiency standard calculation: IEC 60034-2-1;2007

Noise

The noise level of an electrical machine is determined by measuring the sound pressure level in accordance with curve A of the sound level meter to EN 60651 and is indicated in dB (A). The permitted noise levels of electrical machines are fixed in EN 60034-9 (IEC 34-9). The noise level of our motors is well below these limit values.
Air-borne sound measurements are carried out in an anechoic testing chamber to EN 21680-ISO 1680.
Speed corresponding to a mains frequency of 50 Hz and the number of poles.

Noise levels

The noise values listed below refer to 50 Hz at rated voltage with a tolerance of up to + 3 dB(A). Values for pole-changing motors on request. For 60 Hz supply values are 3-5 dB(A) higher.
Sound pressure level LpA and sound power level LWA for three-phase single-speed motors with dimensions and output ratings to IEC 60072

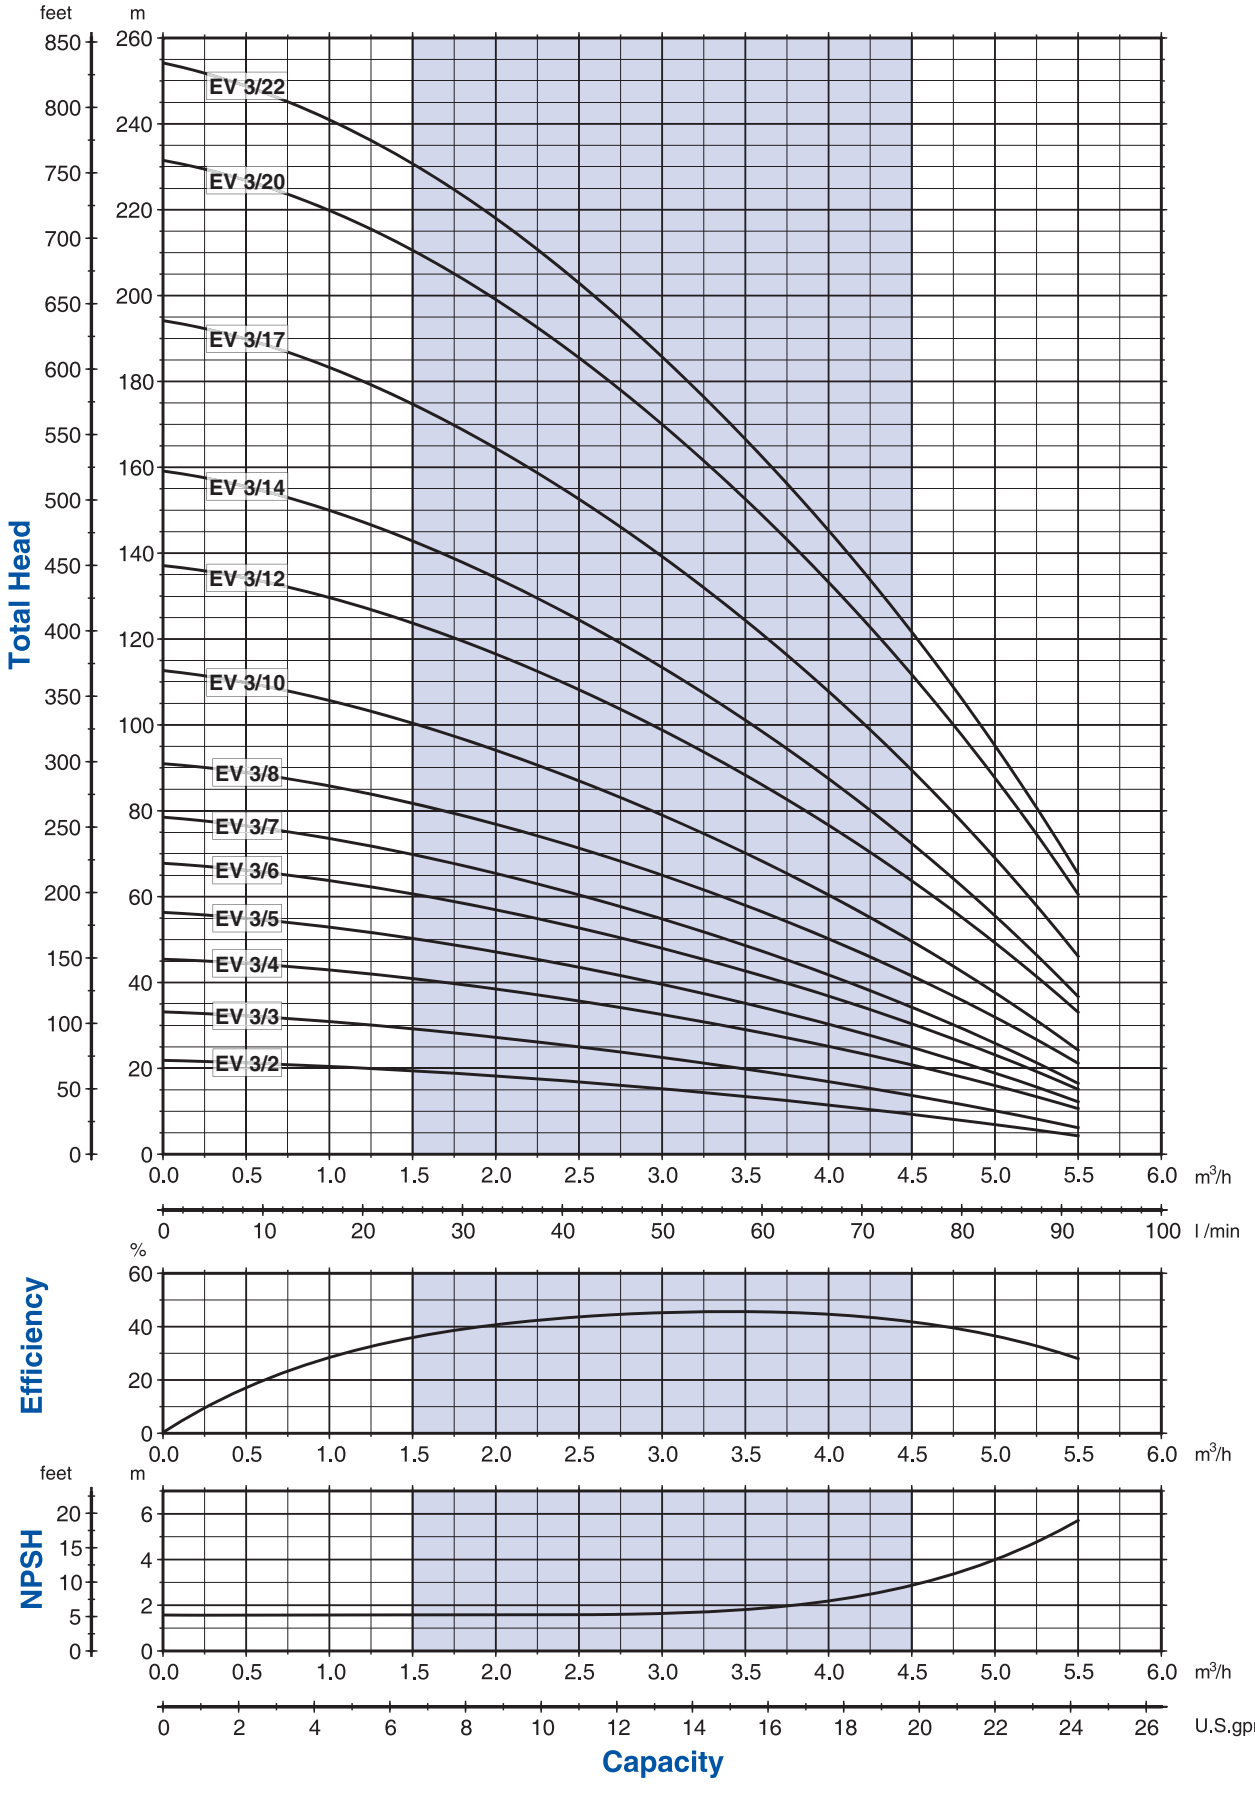

Frame size	2 pole		4 pole	
	L_{WA}	L_{pA}	L_{WA}	L_{pA}

The hydraulic characteristics are guaranteed, according to ISO standard 9906, Annex A, grade 2.

E-Tech by Franklin Electric

It is our policy to continuously develop and improve our products, therefore, we reserve the right to amend specifications without prior notice.

Performance curves 50Hz

Performance curves of Q, H and P depend on the rpm number according to the following formulae:

$$Q_2 = Q_1 \cdot \left(\frac{n_2}{n_1}\right) \quad , \quad H_2 = H_1 \cdot \left(\frac{n_2}{n_1}\right)^2 \quad , \quad P_2 = P_1 \cdot \left(\frac{n_2}{n_1}\right)^3 \quad , \quad \eta \approx 1$$

The rpm number related to the performance curves (Q-H-P) is indicated in the power chart.
Performance curves (Q-H-P) will change in case a motor with rpm number different from indicated values is used.

Q=Capacity, H=Head, P=Pressure, η=Efficiency

Performance curves 50Hz

Performance curves of Q, H and P depend on the rpm number according to the following formulae:

$$Q_2 = Q_1 \cdot \left(\frac{n_2}{n_1}\right) \quad , \quad H_2 = H_1 \cdot \left(\frac{n_2}{n_1}\right)^2 \quad , \quad P_2 = P_1 \cdot \left(\frac{n_2}{n_1}\right)^3 \quad , \quad \eta \approx 1$$

The rpm number related to the performance curves (Q-H-P) is indicated in the power chart.
Performance curves (Q-H-P) will change in case a motor with rpm number different from indicated values is used.
